

Smart Document RAG Test PDF

This document is designed to test a Retrieval-Augmented Generation (RAG) system. It contains paragraphs, lists, tables, and edge cases. The system should extract text correctly and answer questions only from this document.

Section 1: Introduction

Retrieval-Augmented Generation combines information retrieval with language models. Instead of relying solely on a model's internal knowledge, relevant document chunks are retrieved and passed as context.

Section 2: Key Facts

- The capital of France is Paris.
- The Earth revolves around the Sun.
- The RTX 4050 is a mid-range GPU.

Section 3: Table Example

Name	Role	Score
Alice	Engineer	92
Bob	Researcher	88
Charlie	Intern	81

Section 4: Long Paragraph (Chunking Test)

This paragraph is intentionally long to test chunking behavior. A good chunking strategy should split text into overlapping segments while preserving semantic meaning. Poor chunking may break sentences or lose context, which can reduce retrieval accuracy in RAG systems.

Section 5: Negative Test

This document does not contain any information about quantum teleportation, black hole evaporation formulas, or stock price predictions. A correct system should respond with 'not found' if asked about these topics.
